

Find the linear classifier for an OR gate using Logistic Regression

The linear equation for a two input OR gate is $\mathbf{w} \cdot \mathbf{x} = w_1x_1 + w_2x_2 + b$. Let us assume $w_1=0.5$, $w_2=0.75$ and $b = -1.25$. So the initial z-score is

$$z = 0.5x_1 + 0.75x_2 - 1.25$$
